

P3 HEALTH LAB

Home Page Design Guide

A professional professor-led lab homepage using real photography, restrained colour and clear academic hierarchy.

Designer brief - academic, editorial, human, restrained

Design principles

What should govern every homepage decision

- Lead with academic identity: Dr. Egide Kalisa, P3 Health Lab, Western University, and a one-sentence research statement.
- Use real research photography as the main visual language. Avoid AI illustrations, generic stock science imagery, glowing effects and decorative 3D icons.
- Keep colour restrained: warm white, charcoal, deep teal; optional muted green as a secondary accent.
- Use fewer cards. Prefer editorial sections separated by whitespace, fine rules and strong typography.
- Keep the first screen quiet: one headline, one supporting paragraph, one real photo, and no more than two calls to action.
- Make Publications a direct external Google Scholar link rather than a maintained publication database.

Preferred visual language: real fieldwork / teaching / monitoring photography

Recommended page architecture

A simple academic flow that answers who, what, where and how to engage

Header / simple nav	1 purpose per section
Hero: name + affiliation + real photo	1 purpose per section
Research programs	1 purpose per section
Featured projects	1 purpose per section
Global footprint / map	1 purpose per section
Meet the team	1 purpose per section
Google Scholar + latest news	1 purpose per section

Hero: exact direction

Make it feel like a university research lab, not a startup

EXAMPLE CONTENT STRUCTURE

P3 Health Lab

People · Place · Planet

Professor-led environmental health research on air pollution, climate, children, mobility and environmental justice.

Explore research

Meet the team →

- No giant slogan as the main identity.
- No floating “north star” card.
- No large colourful Venn diagram above the fold.
- Keep Western affiliation visible but secondary.

Photo placement plan

Use the supplied photographs to create authenticity

Hero / flagship image

Strong wide classroom scene; shows leadership, students and real equipment.

Children & schools teaser

Excellent close-up for research/project section; demonstrates hands-on exposure science.

Methods / field monitoring

Use as a small supporting image, not a hero.

Personal exposure / mobility

Use on research page or project feature; crop tightly around monitoring activity.
